SUMMARY

Full-stack software engineer with 4 years of professional experience building dynamic, responsive web applications and secure backend APIs with PHP/Laravel and MySQL. Experienced across the whole stack: Livewire, Alpine.js, Tailwind and JavaScript on the frontend; REST APIs, authentication and authorization, and database design on the backend; and server configuration and CI/CD deployment pipelines on AWS, DigitalOcean and Hostinger. Strong troubleshooting and performance-optimization skills, and used to working closely with product, marketing and management teams.

TECHNICAL SKILLS

Frontend: HTML, CSS, JavaScript (jQuery), AJAX, Livewire, Alpine.js, Tailwind CSS, responsive UI implementation, front-end/back-end integration

Backend: PHP 8+, Laravel, MVC architecture, clean and documented code, Eloquent ORM, Filament, Redis, queues, REST/SOAP/XML web services

Databases: MySQL — database design, schema redesign, SQL views, query optimization

APIs & Security: RESTful API design, JWT, OAuth2 (Passport), Sanctum, authentication and authorization, token blacklisting, OWASP-aligned practices, rate limiting

Cloud & DevOps: AWS, DigitalOcean & Hostinger VPS, Nginx, Apache, Docker, Linux, systemd, server configuration, GitHub Actions CI/CD pipelines

Version Control & Practices: Git / Git Flow, PR review, TDD, Agile/Scrum, Jira, debugging, performance optimization, documentation

Integrations: Payment gateways (Tabby, Tamara, Kashier, Paymob, Emkan, Amwal Tech), Zoom API, OCR, BigBlueButton, Zoho

PROFESSIONAL EXPERIENCE

Software Engineer (Full Stack) — Seena Pay Fintech Solutions Aug 2025 – Present
Cairo, Egypt

- Designed and shipped **Tienda**, a full Laravel/Filament e-commerce platform, from development through production, contributing to over EGP 20M in Q1 2026 revenue.
- Designed and delivered **IAM**, a centralized JWT/Passport identity provider serving as the single source of truth for authentication across four internal products.
- Implemented JWT authentication and token blacklisting; produced a security and architecture audit covering authentication, mass-assignment protection and rate limiting (OWASP).
- Resolved duplicate transaction records in a Tabby payment-gateway integration and wrote SQL views to reconcile transfers, preventing double charges.
- Fixed a 5-second TTFB regression and moved JWT blacklist checks from a DB-backed cache to Redis, removing a per-request DB hit.
- Built and maintained GitHub Actions pipelines and systemd services across production and development servers on DigitalOcean and Hostinger.

Software Engineer — Career 180 Jul 2024 – Aug 2025
Nasr City, Cairo

- Built features on a multi-tenant Laravel platform using the TALL stack (Tailwind, Alpine.js, Livewire), including an “Assigned by Admin” feature on the tenant scope delivered for Breadfast.
- Implemented a Payment HTTP Service to isolate payment-gateway failures and improve system reliability.
- Integrated the Zoom Webinar API and OCR AI models to automate webinar workflows and document data extraction.

Backend Software Engineer — Yearex Group Mar 2023 – Jun 2024
Nasr City, Cairo

- Resolved major performance bottlenecks and redesigned critical parts of the database schema for scalability.
- Built a full App Wallet system integrated with the existing payment gateway, and an IP-based Location Service.

SELECTED PROJECTS

Tienda — Full-scale Laravel/Filament e-commerce platform (production).

Career 180 — Multi-tenant career-services/training platform built on the TALL stack.

Freelance Yard — B2B2C freelancing marketplace — full-stack work including an OCR ID feature and employer dashboard.

Auto Mark — Car listings app for browsing, filtering and comparing cars; backend built end to end.

EDUCATION

Bachelor of Computer Science, Benha University — 2019 – 2023
